

Brantree Sixth Form Psychology Learning Journey KS5

**READY
STEADY
EXAM**

How does the environment and biology interact to cause schizophrenia?

How can CBT be used to treat schizophrenia?

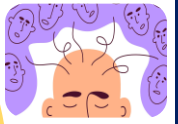

How does drug therapy work?

Does schizophrenia develop due to a dysfunctional family life?

Schizophrenia

Does schizophrenia develop due to biology?

Is diagnosis valid and reliable?

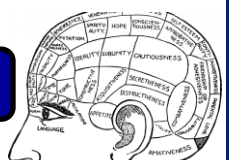

What is schizophrenia?

Should we investigate socially sensitive topics?

Should we use scientific methods to investigate psychology?

Approaches

What are the origins of Psychology as a science?

How does the biological approach explain and treat OCD?

How does the cognitive approach explain and treat depression?

How does the behavioural approach explain and treat phobias?

Interviews

Year 12

Throwback Lessons

Aggression

Is aggression genetic?

How can brain chemistry and hormones explain aggressive behaviour?

How are biological rhythms regulated?

Do the two halves of the brain do different things?

How does the brain recover after trauma?

How can we study the brain?

Does each part of the brain do something different?

What happens during the fight or flight response?

How do institutions such as prisons cause aggression?

Is aggression caused by the world around us?

Is aggression linked to violent video games?

Why and how did aggression evolve?

What is the process of synaptic transmission?

How are neurons structured?

What is the role of the endocrine system in behaviour?

How is the nervous system structured?

Throwback Lessons

Do we have free will over our behaviour?

Is behaviour down to nature or nurture?

Can behaviour be explained through simple cause and effect?

Should we use scientific methods to investigate psychology?

Issues and Debates

How does the humanistic approach explain human behaviour?

How does the psychodynamic approach explain human behaviour?

How does the biological approach explain human behaviour?

How does the cognitive approach explain human behaviour?

How does the social learning theory explain human behaviour?

How does the behaviourist approach explain human behaviour?

What are the origins of Psychology as a science?

How do virtual relationships differ from face to face?

What is the process of a relationship breakdown?

How are relationships maintained?

How do romantic relationships form?

How can evolution explain partner choice?

How does deprivation affect development and adult relationships?

How can we assess attachment styles?

Is attachment due to evolution?

Is attachment learned?

How do animal studies help understand human behaviour?

How does the behavioural approach explain and treat phobias?

What are the characteristics of phobias, depression and OCD?

What are the characteristics of phobias, depression and OCD?

Relationships

Attachment

How do caregivers and infants interact?

What are the stages in which attachment develops?

How do animal studies help understand human behaviour?

Why do some individuals resist social influence?

How can a minority group influence the majority?

How does the process of social change take place?

How can we explain obedient behaviours?

Milgram: Which factors influence why we obey authority?

Zimbardo: Why do people conform to social roles?

Asch: What factors influence the likelihood an individual will conform?

Why do people conform to social groups?

Why do people conform to social groups?

Case Studies

Types of Data

Presenting Data

Self Report

Questionnaires

How do cues help us to remember?

How does information interfere and cause us to forget?

How does information move through our types of memory?

What are the features and types of long-term memory?

What are the features of short-term memory?

How do cues help us to remember?

What factors influence eye-witness testimony?

What techniques can we use to improve eye-witness testimony?

Psychopathology

How can we define abnormal behaviour?

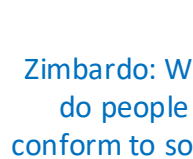

What are the characteristics of phobias, depression and OCD?

Milgram: Which factors influence why we obey authority?

Zimbardo: Why do people conform to social roles?

Asch: What factors influence the likelihood an individual will conform?

Why do people conform to social groups?

EXAMS

Biopsychology

What is the role of the endocrine system in behaviour?

How is the nervous system structured?
